

Discovery Piscine Side Project - 1

The Auto-Quiz Master

A 42 Singapore SUTD initiative

Summary: You will create a multiple-choice trivial game

Version: *0*

IV	Excercise **00:** The Auto-Quiz Master	**5**

Chapter I

Preamble

The IBM 805 Test Scoring Machine is an electromechanical marvel and the undisputed dawn of automated trivia!

It's sort of like a modern Google Form (but weighing hundreds of pounds and strictly requiring No. 2 pencils), combining a barrage of conductive contacts with a highly calibrated analog ammeter. The IBM 805 is particularly suited for processing multiple-choice options, cycling through massive stacks of paper, and proving that humanity will happily subject itself to relentless questioning just to see a final score.

The sensory section consists of hundreds of metal prongs reading the electrical conductivity of graphite marks—no digital microprocessors required! You can use it to score exams, parse four-option choices, or track a running total of correct answers! Reynold B. Johnson used this exact kind of analog sensing to create an experience so terrifyingly efficient that it completely revolutionized the standardized testing industry! All the professional automated grading capabilities you'd expect from the absolute origin of multiple-choice evaluation are here, and more!

The Iterative Loop is the power of the machine, where you make the system react out of the data it's got and the answers you've fed it! It offers a relentless, continuously updating cycle of evaluating options. Iterative logic and data storage, exactly like the for loops, lists, and dictionaries you will use to build your Auto-Quiz Master, are the absolute core of the experience. Refining your trivia questions to test your users' knowledge can be done iteratively and meticulously tweaked.

Total automated control, real-time scoring feedback, a heavy industrial casing, and the ability to declare your absolute intellectual dominance over your friends make the IBM 805 Test Scoring Machine the most professional quality quiz-mastering machine out there!

Chapter II

General rules

- Read the subject completely. Do not rush. Read the instructions carefully from start to finish before writing a single line of code or creating your repository.
- Peer-to-peer learning is your first resource. If you have a question, ask your right neighbor. If you still have a question, ask your left neighbor. You are encouraged to search the internet and use AI.
- The Staff is not your search engine. You should only reach out to the pedagogical team after you have exhausted all other options and discussed the issue with your peers.
- Must use python!
- Have fun. This is your project. Make it yours!
- Vibe coding is allowed. Chill and, again, just have fun.

Chapter III

Specific instruction for today

- Upon completion, present your work to your cohort.

Chapter IV
Exercise 00:
The Auto-Quiz Master

	Exercise 00
Exercise 00: The Auto-Quiz Master	
Turn-in directory : you need to figure this out/	
Files to turn in : `quiz.py`	
Allowed: Vibe Coding	

Concept
A multiple-choice trivia game focusing on a topic you are passionate about (gaming, cars, music, sports, anime etc).

Learning:
Lists, Dictionaries, and Loops.

Teamwork Mechanic:
1. Research and format 5 questions, 4 options per question, and the correct answers.
2. Prompts the AI to build a `for` loop that cycles through questions.

Specific Instructions & Checklist:
[ ] The quiz must contain exactly 5 multiple-choice questions.
[ ] The code must use a `for` or `while` loop to ask the questions one by one.
[ ] The script must track the user's score using a variable (e.g., `score = 0`).
[ ] At the end, the program must print the final score out of 5 and give a custom message (e.g., "3/5: Not bad!").

• `quiz.py`

Exciting, right?

Chapter V

Submission and peer-evaluation

Present your work to the world

`The evaluation process will happen` when you present to your cohort
