

Discovery Piscine Side Project - 3

The Focus Timer (Pomodoro)

A 42 Singapore SUTD initiative

Summary: Build a timer to help you stay focus

Version: *0*

Chapter II

General rules

- Read the subject completely. Do not rush. Read the instructions carefully from start to finish before writing a single line of code or creating your repository.
- Peer-to-peer learning is your first resource. If you have a question, ask your right neighbor. If you still have a question, ask your left neighbor. You are encouraged to search the internet and use AI.
- The Staff is not your search engine. You should only reach out to the pedagogical team after you have exhausted all other options and discussed the issue with your peers.
- Must use python!
- Have fun. This is your project. Make it yours!
- Vibe coding is allowed. Chill and, again, just have fun.

Chapter III

Specific instruction for today

- Upon completion, present your work to your cohort.

Chapter IV Exercise 00:
The Focus Timer (Pomodoro)

	Exercise 00
Exercise 00: The Focus Timer (Pomodoro)	
Turn-in directory : you need to figure this out/	
Files to turn in : `focus_timer.py`	
Allowed: Vibe Coding	

Concept
A terminal-based countdown timer to help students focus on studying for specific intervals, giving them a visual countdown in the terminal.

Learning:
The `time` module, `while` loops, and string formatting.

Teamwork Mechanic:
1. Prompts the AI to handle the logic of taking "minutes" from the user and converting them into total "seconds".
2. Prompts the AI to build the loop that prints the time remaining, updates every second, and clears the previous line so it looks like a real digital clock.

Specific Instructions & Checklist:
[ ] The script must import the `time` module.
[ ] The script must ask the user: "How many minutes do you want to focus?"
[ ] The program must display a countdown ticking down every second (e.g., `Time remaining: 04:59`).
[ ] The UI Upgrade: The AI must be prompted to clear the terminal line so the timer stays in one place, rather than printing a new line for every single second.
[ ] When the timer hits zero, the script must print a celebratory "Time's up! Take a break!" message.

Exciting, right?

Chapter V

Submission and peer-evaluation

Present your work to the world

`The evaluation process will happen` when you present to your cohort
